

CARE OF THE MOUTH FOLLOWING TOOTH EXTRACTION

Please bite on the gauze in your mouth for 30-40 minutes after the procedure. Some bleeding is to be expected after tooth extraction. If persistent and extensive bleeding occurs, place a gauze pad, absorbent cotton or a regular moist non-herbal tea bag over the area and bite down firmly for 30 minutes.

DO NOT RINSE OR SPIT on the day of the extraction. After 24 hours rinse mouth with warm salt water or any prescribed oral rinse 3-4 times daily for 1 week to promote healing.

Arnica Montana (5 pills under the tongue 3x/day) may help with post-operative healing

Please take any medications prescribed for you.

Avoid hot foods and beverages for the next 2 hours. After this time eat any soft foods tolerated, avoiding hard and crunchy foods. Stay away from the surgical area while eating and chewing.

NO SPITTING, SMOKING OR DRINKING THROUGH A STRAW DURING YOUR HEALING PHASE. Doing these things may dislodge the blood clot which can restart bleeding.

Apply ice to the area 20 minutes on, 20 minutes off while awake for the first 24 hours. This will help reduce swelling.

Please follow any additional specific instructions given to you by your doctor.
